

AMAN SHARMA

Sr. Business / System Analyst | US Healthcare Data | Claims · Eligibility · MDM | Snowflake · SQL · HIPAA

amansharma03feb@gmail.com | +91 8404902779 | linkedin.com/in/aman-sharma-a32577162 | Noida, UP, India

CORE COMPETENCIES

US Healthcare Data Analysis · Claims & Eligibility Data · Member Identity Resolution (MDM) · HIPAA Compliance & PHI Governance · SQL (Snowflake · Validation · Data Analysis) · BRD · FRD · Data Requirements · ETL Pipeline Requirements · AWS (Kafka · Airflow · Lambda · S3) · Power BI · MSTR · Tableau · UAT & Data Reconciliation · Business Rules Documentation · Stakeholder Engagement · Agile & Scrum · CSPO

PROFESSIONAL SUMMARY

Senior Business / System Analyst with 6+ years of experience in the US Healthcare domain — eliciting, analysing, and documenting business and data requirements for health insurance data platforms. Currently supporting a Fortune-class US health insurance client across claims, eligibility, member identity resolution (MDM), and HIPAA-compliant reporting workflows. Proficient in SQL-based data analysis and validation in Snowflake — confirming requirements, analysing source data, identifying anomalies, and supporting business stakeholder queries. Experienced in translating business needs into precise data requirements including field definitions, transformation logic, and business rules. Strong liaison between business and technical teams across data engineering, reporting, and analytics. Certified Scrum Product Owner (CSPO). MBA in Business Analytics.

PROFESSIONAL EXPERIENCE

Senior Business / System Analyst | US Healthcare Data | CloudAngles, Noida May 2024 – Present

End-to-end requirements ownership for a Fortune-class US health insurance client — healthcare data pipelines, member MDM, claims and eligibility data, HIPAA compliance, and Snowflake governance across six cross-functional teams.

- ▶ **Healthcare Data Requirements & BRD/FRD:** Engaged with US healthcare client stakeholders to elicit, analyse, and document business and data requirements — preparing and maintaining BRDs, functional requirements, data requirement documents, field definitions, transformation logic, and business rules for high-volume health insurance data platforms.
 - Defined data requirements across member, claims, eligibility, wellness, broker, and biometrics data domains
 - Documented field-level mapping logic, transformation conditions, and business rules governing how source data flows into the target warehouse schema
- ▶ **SQL-Based Data Analysis & Validation (Snowflake):** Performed SQL-based data analysis in Snowflake to validate requirements, analyse source data, confirm field definitions, identify data anomalies, and support business stakeholder queries — including source-to-target reconciliation, row count comparisons, null rate analysis, and join integrity validation across healthcare data tables.
 - Wrote investigative queries to trace specific member records through pipeline stages — identifying where data anomalies originated
 - Used SQL to confirm that transformation rules and business logic were implemented correctly before UAT sign-off
- ▶ **Healthcare Claims & Eligibility Data Analysis:** Analysed health insurance data flows across claims processing, member eligibility and enrolment, wellness programme data, broker channel data, and biometric records — identifying data gaps, anomalies, and improvement opportunities. Supported data quality and consistency across all pipeline stages.
- ▶ **Member Identity Resolution & MDM:** Led requirements definition for a member MDM service unifying records from multiple source systems — claims, eligibility, wellness, broker, rewards, and biometrics — into a single golden record with a canonical Master Member ID propagated end-to-end.
 - Designed deterministic matching rules (SSN fragment, DOB, member ID) and probabilistic matching rules (weighted name, address, demographic scoring)
 - Defined collapse and merge logic — governing when duplicate records are deduplicated and assigned a Master Member ID across downstream product consumers
 - Ensured zero member data loss across claims, rewards, biometric readings, and wellness events
- ▶ **HIPAA Compliance & PHI Governance:** Served as compliance anchor across six cross-functional teams — governed PHI field-level classification, access-tier definitions, minimum necessary standards, and audit trail requirements across the full data lifecycle. Ensured all data flows complied with HIPAA regulations and healthcare data governance standards.

- ▶ **ETL Pipeline & System Integration Requirements:** Defined requirements for dual-mode data ingestion — real-time streaming via Apache Kafka and scheduled file-based via Apache Airflow on AWS. Reduced data processing time by 50%. Defined REST API integration specs and validated payload structures end-to-end with engineering.
- ▶ **Snowflake Data Warehouse Governance:** Primary BA for Snowflake — defined table structures, data contracts between pipeline stages, field naming standards, and governed which datasets are exposed via platform UI versus reporting layers (MSTR, Power BI).
- ▶ **Outbound Reporting (AWS Lambda + S3 / SFTP):** Owned requirements for automated report generation and delivery to client S3 buckets and SFTP folders. Provided walkthroughs of data outputs and metrics to US business stakeholders to support informed decision-making.
- ▶ **UAT & Data Reconciliation:** Supported UAT by defining test scenarios, validating outputs against business rules and source data, and performing data reconciliation queries in Snowflake. Led RCA for 79 DPIs and 5 PIs — resolving production issues while maintaining client SLAs.
- ▶ **Business–Technology Liaison:** Acted as key liaison between US business stakeholders and data engineering, reporting, and analytics teams — ensuring alignment on requirements, timely delivery, and accurate implementation of business and data logic.
- ▶ **Recognition:** Back-to-back 5-star performance ratings with two promotions within six months.

Business Analyst | Product Owner | Algoworks, Noida

April 2022 – May 2024

AI chatbot delivery, WMS migration, enterprise analytics, and Product Owner responsibilities across SaaS and enterprise clients.

- ▶ **AI Chatbot — Requirements & Data Analysis:** Led BA for a sales enablement AI chatbot — defined use cases, structured training data requirements, designed role-based prompting architecture, and established KPIs for measuring response accuracy. Improved response accuracy by 30%.
- ▶ **Product Owner — Agile Delivery:** Facilitated daily standups, backlog grooming, sprint planning, and change request management. 98% sprint adherence, 70% lifecycle risk reduction.
- ▶ **AI POC (Recommendation & Generative Chat):** Led feasibility and POC for AI implementation — defined evaluation criteria and integration requirements.
- ▶ **WMS Migration (.NET → XAML):** Owned requirements for full tech stack migration on handheld devices — UX requirements for 55+ year-old user persona.
- ▶ **Power BI Dashboards:** Built leadership dashboards tracking employee KPIs from timesheet data. Competitive gap analysis increased proposal acceptance by 25%.

Business Analyst | AdCuratio Media Inc., Bangalore

April 2021 – April 2022

SaaS ad platform for US clients — requirements elicitation, data integration, cross-functional team leadership.

- ▶ **Multi-Channel SaaS Platform:** Led BA for addressable TV advertising SaaS platform — gathered requirements from US clients, maintained product backlog, executed UAT. Led cross-functional team of 10 from entry-level to CPO/CEO level.
- ▶ **Data Integration:** Integrated Experian demographic data — mapped third-party data fields to platform targeting model for geo/persona-targeted ad delivery.
- ▶ **Reporting:** Google Data Studio and Tableau dashboards — 75% reporting time reduction. Automated billing and campaign reports via Tableau integration.

Business Analyst | Aavas Financiers Ltd, Jaipur

May 2019 – March 2021

Digital transformation for a listed NBFC — credit automation, B2C mobile app, KYC compliance, and data reporting.

- ▶ **Credit Automation:** Implemented credit automation system — 60% manual workload reduction, 20% business growth. BRD, FRD, SRS documentation, UAT.
- ▶ **B2C Mobile App:** Led BA for financing app with Razorpay integration — 20% EMI revenue increase, 30% sales lead growth.
- ▶ **KYC Compliance:** Managed KYC workflow requirements and audit trail documentation under RBI regulatory framework.
- ▶ **KPI Dashboards:** MySQL and Excel automated dashboards — 60% manual reporting reduction. Trained 200 users, reduced backlog by 80%.

SKILLS & TOOLS

Healthcare Data: Claims processing · Eligibility & enrolment · Member data · Provider data · Wellness & biometrics · PHI / PII governance · HIPAA compliance · Member identity resolution (MDM)

SQL & Data Analysis: Snowflake · SQL (data validation · source-to-target reconciliation · anomaly detection · join analysis · row count comparisons) · MySQL · Data quality analysis

Requirements & BA: BRD · FRD · Data requirement documents · Field definitions · Business rules · Transformation logic · User stories · Acceptance criteria · BPMN · UML · UAT

Reporting & BI: Power BI · MicroStrategy (MSTR) · Tableau · Google Data Studio · Excel

Data Platform & ETL: AWS (Kafka · Airflow · Lambda · S3) · Snowflake · REST API · ETL pipeline requirements · Data contracts · MDM

Agile & Product: CSPO · Agile · Scrum · JIRA · Confluence · Backlog management · Stakeholder engagement

EDUCATION

2023–2025	MBA – Business Analytics	D.Y. Patil University
2015–2019	B.Tech – Computer Science	Maharishi Dayanand University, Rohtak

CERTIFICATIONS

- ▶ Certified Scrum Product Owner (CSPO) – Scrum Alliance
- ▶ Agile and Scrum Fundamentals (CD0116EN)
- ▶ DevOps Basics for Everyone (CD0115EN)
- ▶ Google Analytics for Beginners
- ▶ Tableau Essential Training
- ▶ Goal Setting: Objectives and Key Results (OKRs)
